

Chemical nature

BMG-C4-03 is a polysaccharide with functional additives.

Physical properties

Physical form	Fine-grained powder
Colour	From beige to yellow-brown
Odor	Specific
Ionic charge	Anionic
Molecular weight	Low
Colour of 3% water solution	From light brown to dark brown
pH of 3% water solution	2,80 - 3,20
Bulk density, g/cm ³	0,50 - 0,60
Mass fraction of dry substances, not less, %	85

Application areas

BMG-C4-03 is used to increase OER of palm oil.

Operating principle

BMG-C4-03 forms a thin film which separates the oil from the surface of the solids.

Advantages

- Increases OER extraction by 5% for CPO;
- Reduces oil losses in Underflow, Heavy Phase, Cake and Mill effluent (POME);
- Reduces extraction time and water consumption up to 50%;
- No changes needed in Mills operating procedures, low implementation and running costs;
- 100% biodegradable;
- Non-toxic and environmentally friendly.

Application

BMG-C4-03 is used as a working solution with a concentration of no more than 3%.
Stirring speed – 100 rpm (until a funnel forms).
Mixing time – 20-30 minutes (or until completely dissolved).

The working solution BMG-C4-03 is dosed into DCO stream after the COT pump and before clarification settling tank.

Dosage

Recommended consumption of BMG-C4-03:

- For dry product – 0.3-1 kg/m³ of COT flow;
- For working solution – 10-33 l/m³ of COT flow.

To clarify the optimal dosages of BMG-C4-03, it is recommended to conduct laboratory tests and/or industrial trials.

Packaging

BMG-C4-03 is supplied in 20 kg bags.

Storage

BMG-C4-03 is recommended to be stored in closed, ventilated warehouses under conditions that prevent exposure to precipitation and dust, protected from direct sunlight, at relative humidity no more than 75% and at temperatures from +5 to +35 °C.

Guaranteed shelf life:

- 36 months from the date of manufacture, 7 days after opening the package;
- 3 days as a working solution from the moment of preparation.

Safety measures

Safety data sheet available upon request.
